Въпрос 3

What will happen if you try to build a program(compile+link), which has a call to declared function `void foo()`, which has no body?

Отговори

○ Linker error `undefined reference to foo()`;

◉ There will be no build errors, but the call to `foo()` will result in undefined behavior;

○ Compilation error `call to foo() is ambiguous`;

○ Compilation warning `foo() is defined but not used`;
